

P&B Drives Down Rear-end Collision Rates with Mobileye

Immediate Benefit – Dramatic Drop in Rear-end Collisions, Enthusiastic Adoption by Drivers

P&B Transport is a transportation and logistics company, driving in both the US and Canada. They provide next-day delivery throughout the Northeastern US and as far south as Virginia. Their routes take them through very congested area where the risk of collision is high. Add to this the extra time-pressure of next-day deliveries and it's a recipe for potential rear-end crashes in particular.

By coincidence, when company Founder and VP Jimmy Pardo rented a car on a personal trip, it came equipped with Mobileye and the collision avoidance system helped him prevent what could have been a serious collision. According to Pardo, this experience led him to think that Mobileye might be a solution to his fleet's collision issues. A short while later the fleet began installing Mobileye's collision avoidance system in their vehicles.

"From drivers initially being hesitant to drive with Mobileye in their trucks we now have drivers insisting on having it installed as they see the benefits and appreciate having it as an added safety tool in their trucks."

-Jimmy Pardo, Vice-President and Founder, P&B Transport

Client

P&B Transport,
Canada and Northeast US

Industry

Transportation and Logistics

Challenge

Specializing in deliveries throughout the crowded Northeastern US, P&B drivers are faced with difficult traffic conditions

Solution

After personal experience with Mobileye, P&B's Vice-President and Founder decided to try it out on several of the fleet's trucks

Outcome

A dramatic drop in the number of rear-end collisions led the company to expand the program to additional vehicles

According to P&B, within a week, the company noticed their drivers improved driving habits. Collision rates went way down, with rear-end collisions almost completely eliminated. Additionally, P&B says that drivers, who at first were hesitant about the new collision avoidance system, quickly began to appreciate the benefits of having an extra pair of eyes looking out for them. One driver even wanted to put off receiving a new vehicle until Mobileye could be installed!

Based on the company's stats, since installing Mobileye, collision rates dropped 80% and as a result the company's insurance rating has improved to AAA, which hopefully will lead to lower premiums in the future. P&B's insurer has been quite supportive of the program according to Pardo, who also believes, "we avoided significant increases due to the added safety features installed in all of our highway trucks."

In addition, for transport companies, time really is money. Aside from safety considerations, collisions can put a serious dent not only into vehicles but into your schedule. Using Mobileye's collision avoidance can not only keep your drivers safe, but also help keep them on time.

About Mobileye

Mobileye, an Intel Company, is a global leader in the development of computer vision and machine learning, data analysis, localization, and mapping technologies for advanced driver assistance systems and autonomous driving solutions. Its technology is integrated into hundreds of new car models from the world's major automakers including BMW, Ford, General Motors, Honda and more. In fact, over 30 million vehicles worldwide are equipped with Mobileye technology.

Mobileye's aftermarket collision avoidance system is available for existing cars, trucks, buses, and RVs, so that the driver of almost any vehicle can reap the benefits of a robust safety system. The system is available with a single, forward-facing camera suitable for most vehicles, or in a multi-camera solution (Mobileye Shield+™) designed specifically for large commercial vehicles with hazardous blind spots.

Fleets worldwide have experienced reductions in collisions and associated costs with Mobileye. We can help your fleet achieve the same.
